

Billi™

Alpine Range

Energy efficient and small footprint for compact spaces

Providing a constant stream of fresh, filtered chilled, sparkling or ambient water, the Billi Alpine range offers premium filtration, easy installation and lower power consumption.

Features and benefits

Eco-Intelligence technology

Alpine 60, 120 and 125 units incorporate Eco-Intelligence technology which is a self-learning timer allowing the unit to only operate when required. The self learning timer monitors daily usage patterns and even recognises evening and weekend changes in routine to effectively minimise energy consumption.

Adjustable chilled temperature

A simple adjustable control knob allows the chilled water temperature to be raised to 15°C or lowered to 6°C for perfectly chilled, refreshing drinks, with your required temperature being quickly reached and maintained.

Ice bank cooling technology

Billi's Ice Bank technology is available on the Alpine Sparkling range. With a semi-frozen core reservoir, both chilled and sparkling supply pass through enabling greater chilling capacity and carbonation.

Versatility - Chilled & Ambient

Billi's Alpine 125 provides filtered water at BOTH ambient and chilled temperatures. Ambient dispensing is bottomless, continuing to dispense well after tank storage reservoirs are depleted.

The luxury of sparkling water

The CO₂ injection system ensures the saturation of CO₂ in the water is high which means it has a better life and, consequently, taste.

Adjust the level of sparkling to suit your taste with adjustable controls up to 5 bar of CO₂ pressure. Packaging includes CO₂ canister.

Water options

Option	Chilled	Sparkling	Ambient

Configuration

The Billi Alpine chilled and ambient models do not require cupboard ventilation, grilles or fans.

All air-cooled products including the Alpine Sparkling range, require appropriate joinery ventilation.

Please refer to installation guides for more details.
